## Objective/Background/Motivation

- *Personal financial management is very important nowadays, yet many people lack this skill*
- *Budgets = very useful for to keep track of expenses, however tedious to keep one manually*
- *AI help make a budget = convenient, more people may make use of budgets to manage personal finances*

## Existing Solution

- *WorkDay, a app that helps management of businesses, has a expense manager (has receipt scanner)*
- *Problem with existing solution : Aimed at businesses, not personal use. Costs money, discouraging people to use this service*

## Your Solution

- *A free version of the workday expense tracker service that is modified to fit personal use*
- *A AI that can scan receipts and through this make an expense summary for you automatically, though some services (e.g. MTR) still need to be manually input as it does not have receipts*
- *Expense summary total expenses, divides expenses into different categories (e.g. travel, food, entertainment, etc.) (raw expense data → information to improve spending efficiency)*

## Resources Needed

- *AI text reader, Camera*
